

The background is a complex digital graphic. It features a grid of white lines on a dark blue background, with a large, stylized white arrow pointing from the top left towards the bottom right. The arrow's path is defined by a series of concentric, semi-circular lines that create a sense of depth and movement. In the upper right corner, there is a circular inset showing a close-up of a person's hands using a laptop. The overall aesthetic is high-tech and professional.

With ExpertEraser™ from Ibas you can in a secure and effective way erase hard disks. While traditional erasure tools provide a false sense of security that your data is permanently erased, Ibas guarantees the result.

You can use ExpertEraser™ anytime, anywhere and on any type of working hard disk. It utilises cutting edge erasure technology. Traditional tools only touch the surface, but ExpertEraser™ enters the core and erases 100% of the information on your hard disk. Now it's finally safe to dispose of equipment without losing track of sensitive data.

ExpertEraser™ is designed for organisations or individuals that requires an easy, fast and effective method for eliminating sensitive data from hard disks. ExpertEraser™ from Ibas comes in packages with 10/50/100 erasures and a package with 10 erasures with additional Internet downloading. Using this tool ensures a safe and effective disposal of all information on any hard disk.

ExpertEraser™ from Ibas is a new generation erasure tool. ExpertEraser™ comes in packages with 10/50/100 erasures and a package with 10 erasures with additional Internet downloading.

The Expert Tool for Secure Erasure - by Ibas

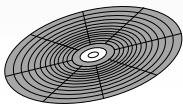

ExpertEraser™

The Expert Tool for Secure Erasure - by Ibas

ExpertEraser™ is a DOS based application for secure erasure of hard disks. It runs from the floppy drive working independent of the computers BIOS and operating system. ExpertEraser™ works on all IBM compatible computers running DOS, regardless of the type of hard disk.

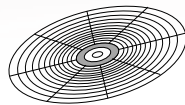

Traditional erasure tools and formatting tools only erase parts of a hard disk, or simply tells the operating system that files no longer exists. ExpertEraser™ physically overwrites all sectors on the hard disk.

■ Untouched surface

ExpertEraser™

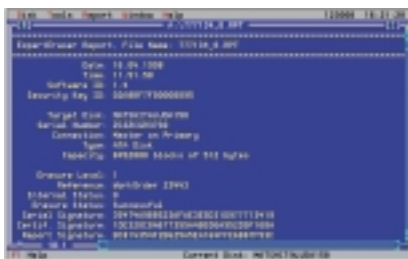

□ Erased surface

The ExpertEraser™ user interface is easy to use and is based on windows and menus. When the hard disk is fully erased, the software generates a report documenting the erasure.

The user interface in ExpertEraser™ is intuitive and easy to use.

Example of report generated after a successful erasure.

Features

- DOS based application for minimum overhead
- Auto-detection of both AT/IDE and SCSI hard disks
- Operates directly on the hard disk (bypasses BIOS and OS)
- Menu driven application with context sensitive help
- Mouse support
- Refill of erasures through Internet
- Media analysis for erasure verification
- Automatic report generation
- Built in full featured text editor
- Built in system for quality control and trace ability
- Sector viewer for visual inspection of overwrites
- Complies with US department of defence standard 5220.22-M
- Command Line Options
- Display of time remaining

System Requirements

- IBM compatible PC with i386 processor or better
- 1.44 MB floppy drive
- 640 KB RAM
- Printer or serial port (10 with refill)
- IDE or EIDE (for erasing AT/IDE drives)
- SCSI host adapter w/ASPI driver (for erasing SCSI drives)
